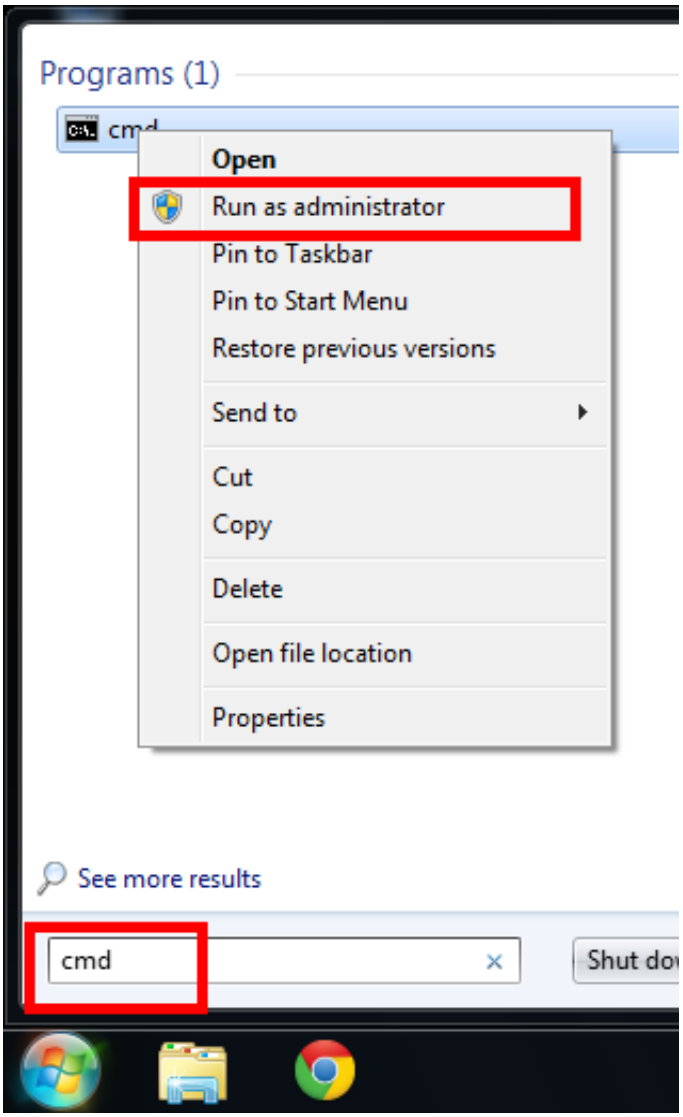
  - German 10
- Aloaha legacy application single sign-on 10

Installation

1. Please download http://www.aloaha.com/download/smartlogin.zip
2. Start smartlogin.exe with a right click and using “Run as administrator”
3. Start Aloaha and enter license key. Evaluation keys can be requested from info@aloaha.com

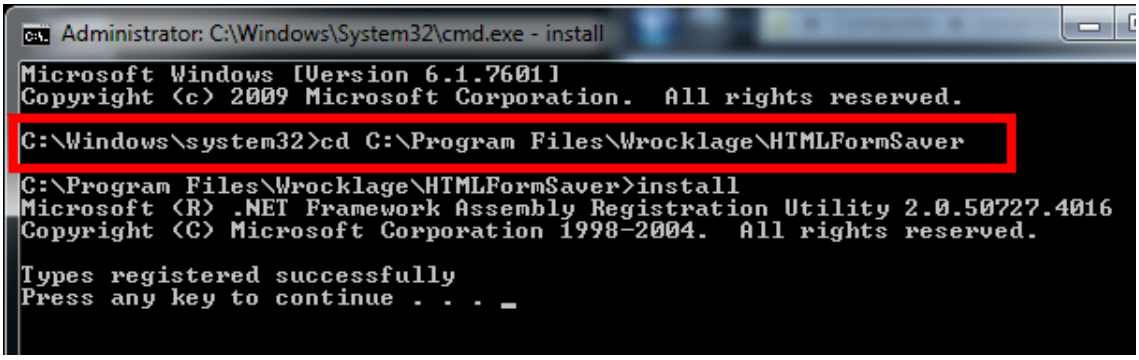
Register Internet Explorer Extension

1. To be able to register the Internet Explorer Extension you need elevated rights. That means you need to start a command prompt with “Run as administrator” as shown below:

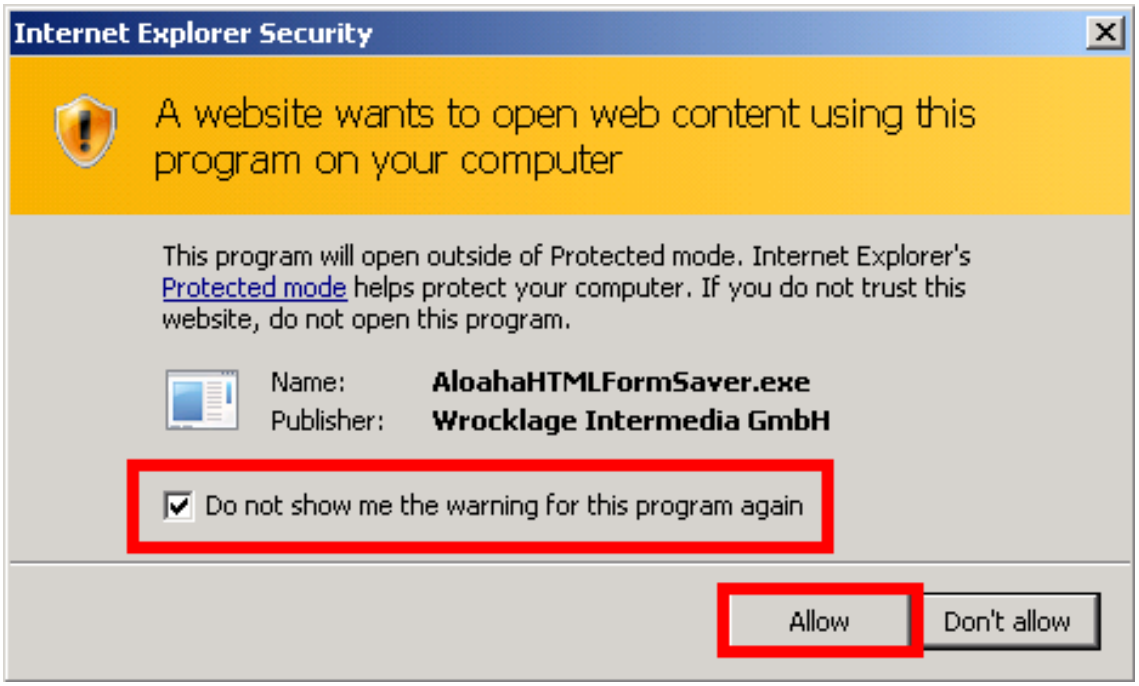


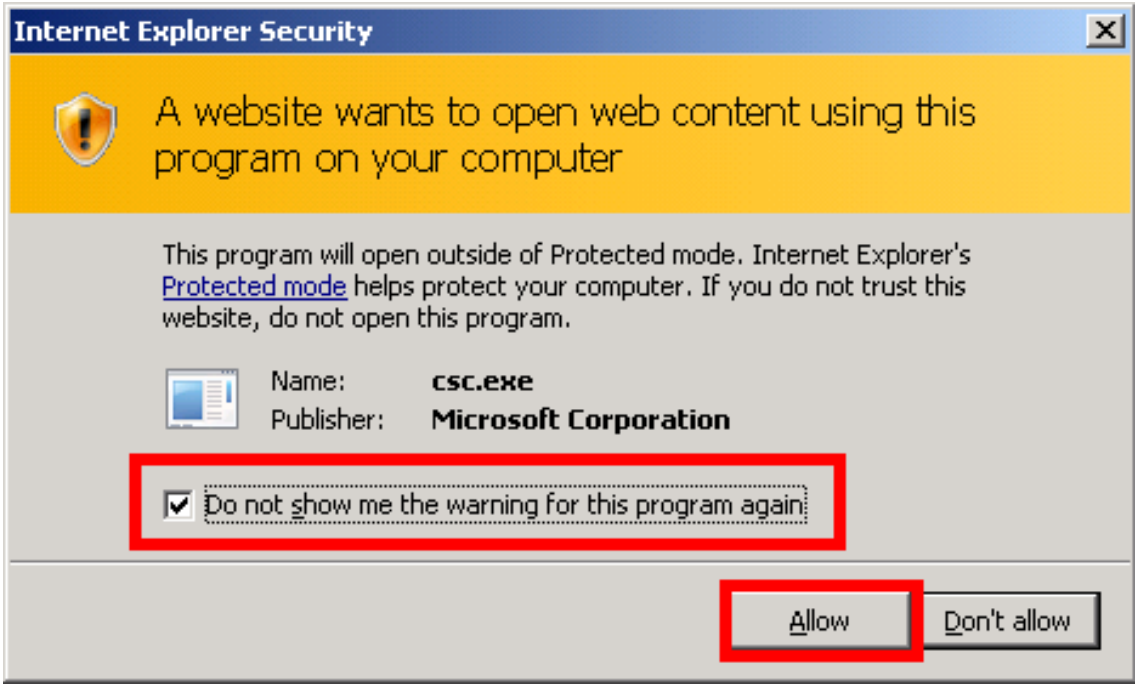
2. Once the command prompt is open you need to go to the **HTMLFormSaver** directory at your installation location. Usually that is **Program Files\Wrocklage** or on 64 bit Machines **Program Files (x86)\wrocklage**. Start the batch **install.bat** in that folder.

   Make sure that all instances of your Internet Explorer are closed since otherwise you need to re-logon to your windows session after activating the extension.

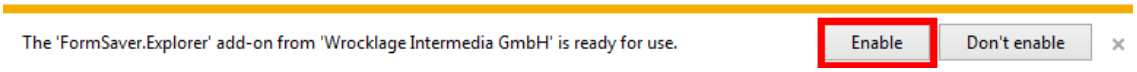


3. When you open now your Internet Explorer for the first time after registering the extension you might see one or all of the following dialogs. Obviously you need to allow Aloaha full access to your Internet Explorer Sessions. So please answer the dialogs with **allow** and **enable**.





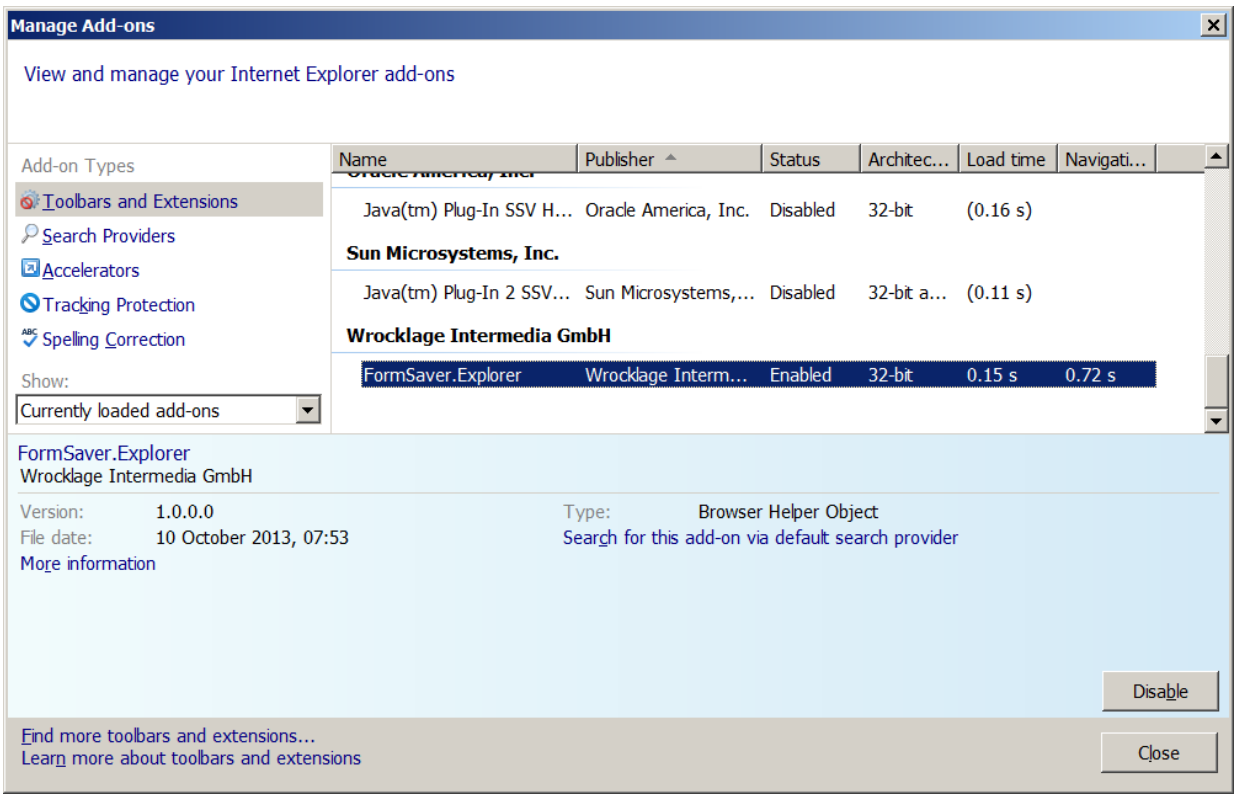
Internet Explorer Security
A website wants to open web content using this program on your computer
This program will open outside of Protected mode. Internet Explorer's Protected mode helps protect your computer. If you do not trust this website, do not open this program.
Name: csc.exe
Publisher: Microsoft Corporation
Do not show me the warning for this program again
Allow
Don't allow



The 'FormSaver.Explorer' add-on from 'Wrocklage Intermedia GmbH' is ready for use.
Enable
Don't enable

Manage Internet Explorer Extension

You can always manage the extension form within the Internet Explorers “**Manage Add-Ons**”

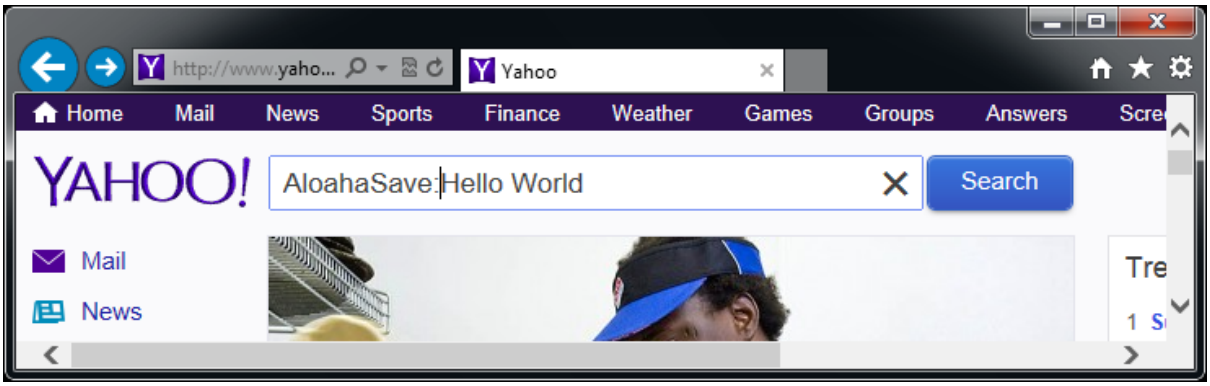


De-register Internet Explorer Extension

Please do the same steps as explained in chapter “Register Internet Explorer Extension”. But instead of calling **install.bat** you would call **uninstall.bat**

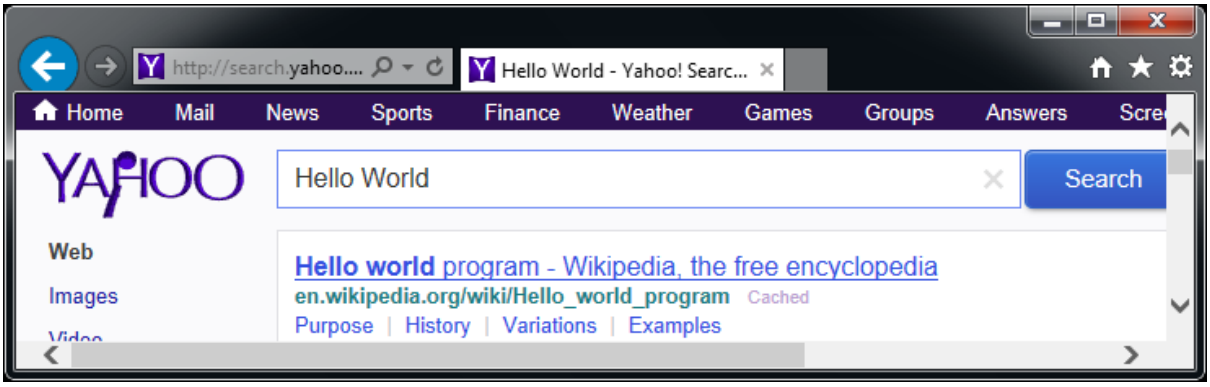
Using Aloaha Web SSO and Web Form Saver

To save form field content to Aloaha just add the keyword **AloahaSave:** in front of your content as you an see below. Then press the search button. To save all formfields please use the keyword **AloahaSaveAll:** once in any formfield.



After you pressed the form field submit button (search in this example) you will see that the keywords vanishes. That means that the content has been saved to Aloaha.

Whenever you now re-visit the same URL Aloaha will pre-fill that form field for you!



Edit saved form fields

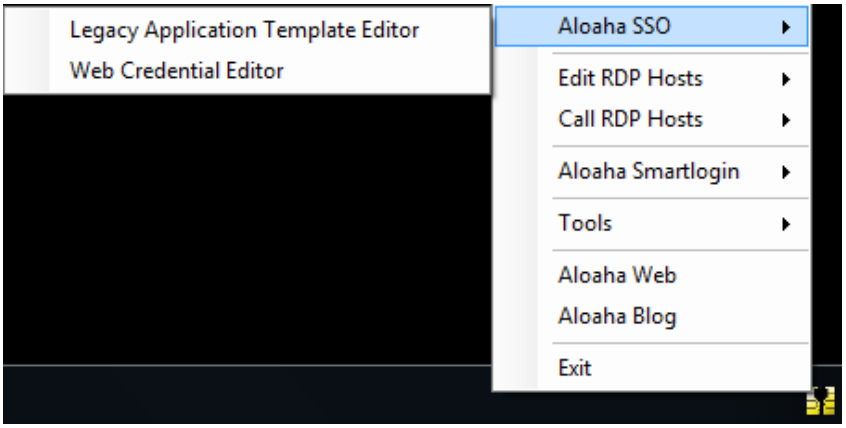
It is possible to edit the values saved with the Aloaha HTML Form saver/SSO. Via startup/autostart folder the Aloaha Systray Module is being started. If you right click on it you find the “Web Credential Editor” under SSO.

Please note that the menu Aloaha SSO -> Web Credential Editor is only visible if the following keys are set to 1:

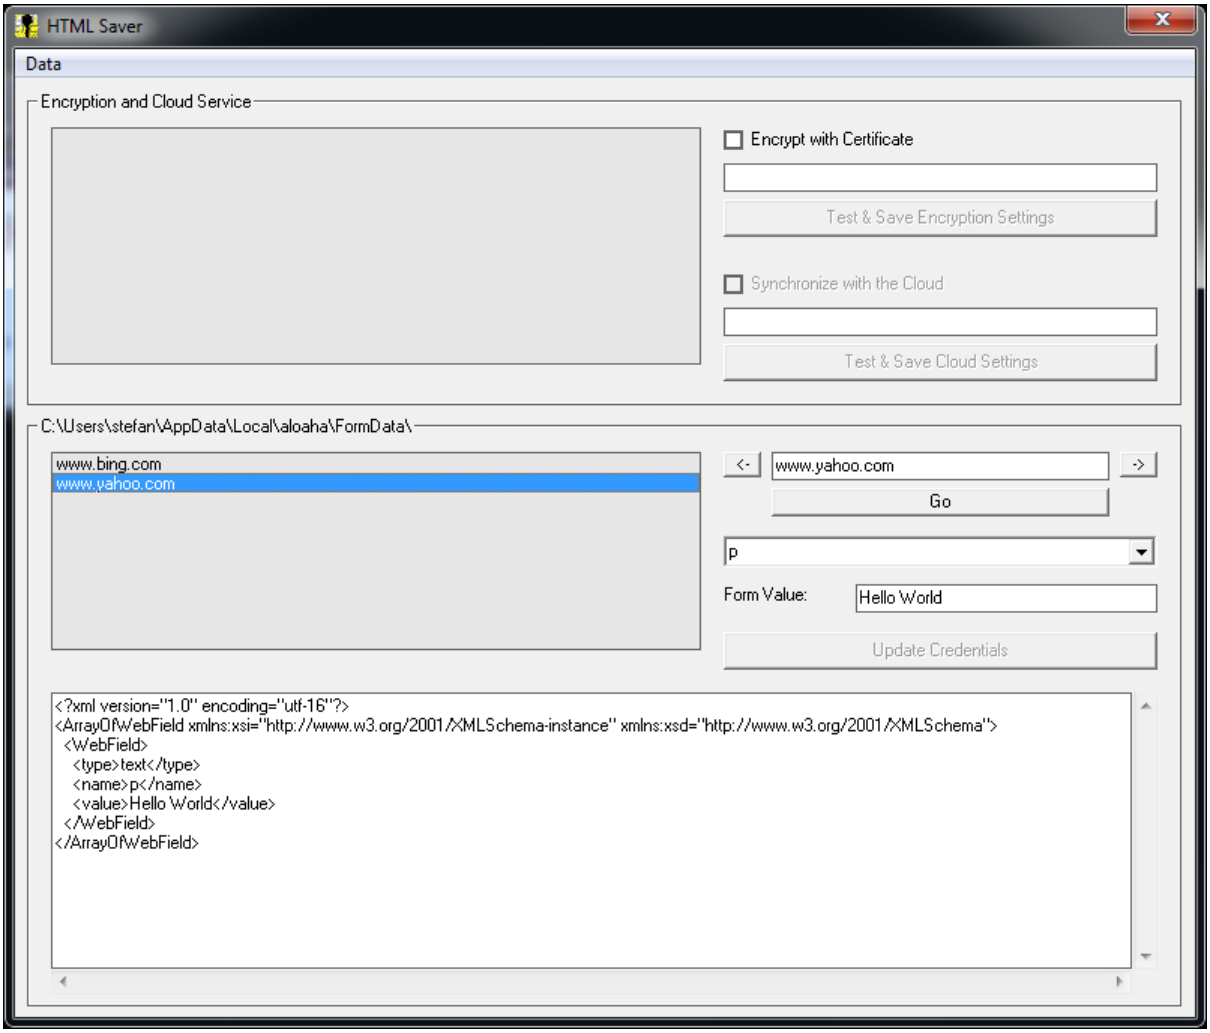
HKLM\SOFTWARE\<Wow6432Node>\Aloaha\SysTray\aloahasso and
HKLM\SOFTWARE\<Wow6432Node>\Aloaha\SysTray\websso

More settings of HKLM\SOFTWARE\<Wow6432Node>\Aloaha\SysTray are explained in:

PDF: http://www.aloaha.com/handbuecher/l_sso.pdf
DOCX: http://www.aloaha.com/handbuecher/l_sso.docx



The following Dialog will start:



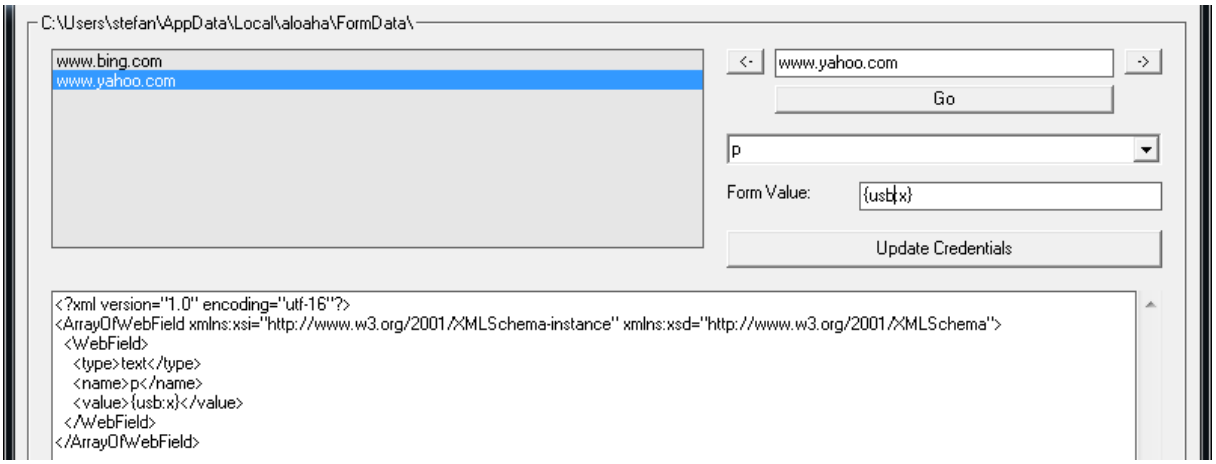
To edit the form field content just double click on the URL, choose the form field in the drop down list and edit the value. Click “Update Credentials” to save the changed value back to disk.

Use Smart Card or USB Token as security token for credentials

As you know it already from the legacy application form saver it is possible to use place holders for credentials saved with your Smart Card or plain USB Memory Stick.

USB Placeholder:

If you want Aloaha to use encrypted credentials for user x please use as form field value **{USB:x}**



Smart Card Placeholder:

If you want Aloaha to use encrypted credentials for user x please use as form field value **{Card:x}**
