

Aloaha PDF Suite introduces tracking Images

Ibbenbueren, 22.06.2005 – Aloaha Software, part of Wrocklage Intermedia GmbH, today released Build 2.1.69 of its award winning Aloaha PDF Suite. This Build includes an innovative new feature which allows the creator of a PDF Document to track exactly who is reading which page of the generated PDF Document.

To be able to do PDF tracking the document has to be loaded into the Aloaha PDF Editor which is part of the Aloaha PDF Suite. In the page menu a new item called tracking image has been added. The tracking image needs to be somewhere located on an http server and has to be the format jpg. If the image is not available or the reader of the document has no access to that web server the Adobe Reader will generate a warning.

It is possible to add HTTP GET options to the URL. For example <http://www.aloaha.com/download/pixel.jpg?source=pressrelease>
